ESA Grid Processing on Demand

GlobColour

Developing a European Service for Ocean Colour

Satellite based ocean colour information supporting the requirements of global ocean carbon cycle research.

© ESA 2007

Credit: GlobColour Team

Oil (may 2004)

Context

- Initiated in 2005 and funded by the ESA DUE Programme
- Driven by the global ocean colour user community: IOCCG, IOCCP, UK Met-Office, ...

Objectives

- Satisfy emerging demand for validated merged ocean colour derived information
- Develop a satellite based ocean colour data service to support global carbon-cycle research and operational oceanography
- Provide a long time-series (10 years) of ocean-colour information by merging together data streams from different ocean-colour sensors:
MERIS (ESA), SeaWiFS (NASA), MODIS-AQUA (NASA)
- Put in place the capacity to continue production of such time series in the future

Algorithm inter-comparison and trade-off analysis against in situ data

Merging recommendations:

- **Weighted averaging** of bio-optical properties (chl-a)
- **GSM01model** (Maritorena et al., 2002)

• Input

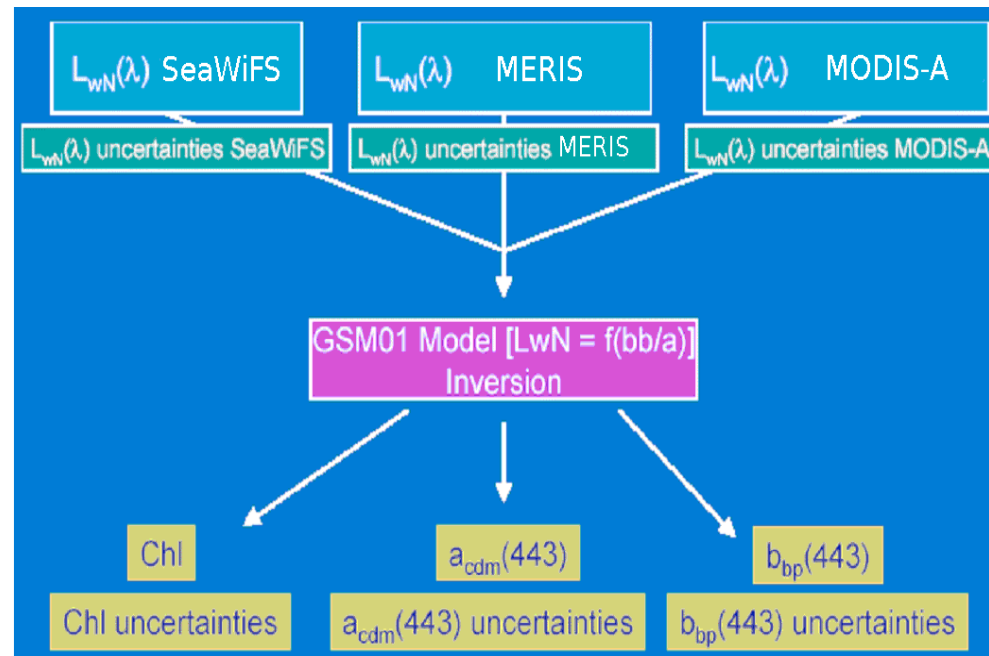

$L_{wN}(\lambda)$ from all available sensors
+ sensor specific error estimates

• Model

Inversion procedure of a bio-optical merging model

• Output

Several bio-geochemical products
+ **error estimates per pixel**

SeaWiFS

MODIS

MERIS

CHL

K490

L490

In-situ Diagnostic Data Set for characterization and validation

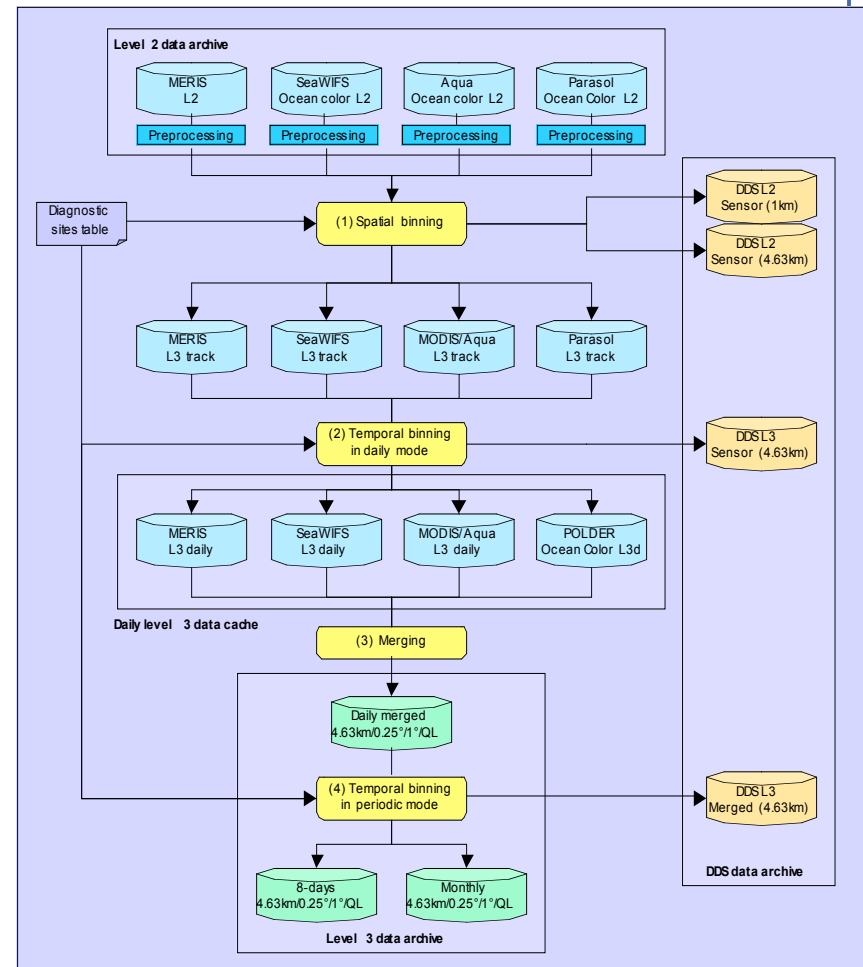

Achievement:
Statistical uncertainties have been derived and are used for the data merging

Main modules

- Data acquisition
- Pre-processing
- Spatial binning
- Temporal binning
- Merging
- Formatting (netCDF, JPG/PNG)

Data Volumes

- More than 25 Tb of input data (level 2)
- 14 Tb of intermediate products
- 4.5 Tb of distributed data

Daily, 8-days, monthly products at 4.6 km res.

<http://www.globcolour.info>

- Normalised water-leaving radiance @ 412, 443, 490, 510, 531, 555, 620 nm
- Water-leaving radiance @ 670, 681, 709 nm
- Particle backscattering coefficient (bbp443)
- CDM absorption (aCDM443)
- Chlorophyll concentration (Chla)
- Total Suspended Matter
- Diffuse attenuation coefficient @ 490nm (K_d490)
- Aerosol Optical Thickness (T865)
- Data quality flags
- Cloud fraction
- Excess of radiance at ~ 555 nm (turbidity index) (EL555)
- GSM01 error estimates per pixel for each layer

MODIS-only, MERIS-only

to access GlobColour data sets

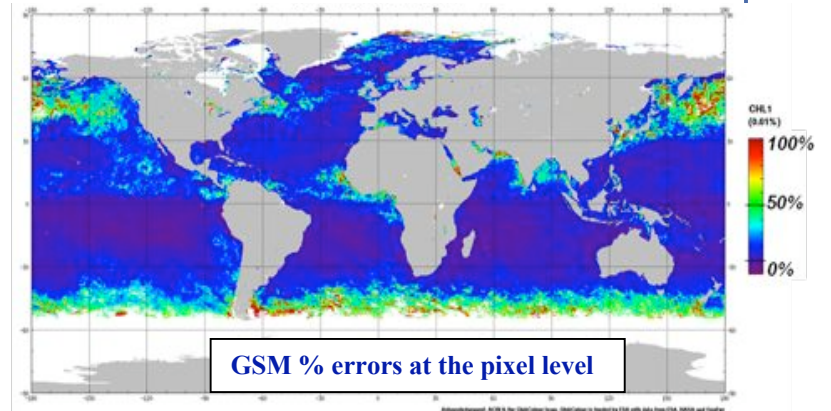

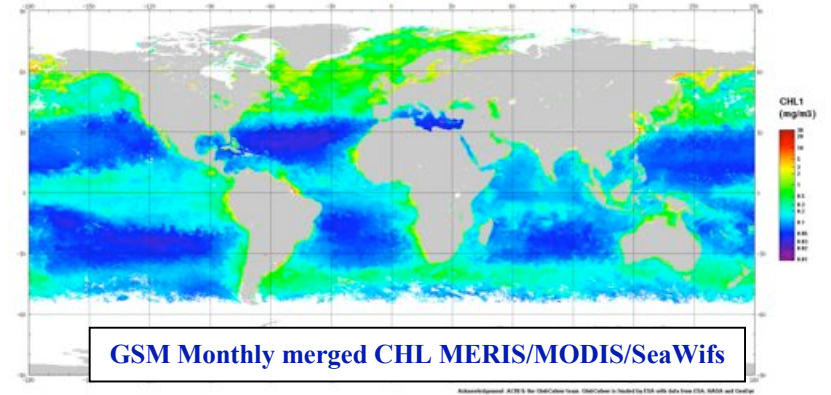

The screenshot shows the HERMES web portal interface for GlobColour product selection. The browser address bar displays <http://hermes.acri.fr/>. The page features the ESA, GlobColour, Hermes, and ACRI logos. A world map shows a selected area in the North Atlantic. The interface includes several sections:

- Product type:** Radio buttons for FPS (selected) and DDS.
- Select an area on map or enter coordinates:** Input fields for North (71°N), West (74°W), East (35°E), and South (14°N), with a Reset button.
- Resolution:** Radio buttons for 1 km (DDS only), 4 km (selected), 25 km, and 100 km.
- Select product parameters:** A grid of checkboxes for parameters such as CHL1, CHL2, BBP, CDM, TSM, L412, L443, L490, L510, L531, L555, L620, L670, L681, L709, KD490, EL555, T865, and CF.
- Select a date or period:** From (01/09/1997) to (31/12/2007).
- Binning period:** Radio buttons for track (DDS only), daily, 8-days, and monthly (selected).
- Selected products list:** A table listing selected products with checkboxes, including:

Product ID	Product Name	Count
<input checked="" type="checkbox"/>	L3b_19970901-19970930_GLOB_4_AV-SWF_CHL1_MO_00.nc.gz	#1
<input checked="" type="checkbox"/>	L3b_19970901-19970930_GLOB_4_GSM-SWF_CHL1_MO_00.nc.gz	#
<input checked="" type="checkbox"/>	L3b_19971001-19971031_GLOB_4_AV-SWF_CHL1_MO_00.nc.gz	#3
<input checked="" type="checkbox"/>	L3b_19971001-19971031_GLOB_4_GSM-SWF_CHL1_MO_00.nc.gz	#
<input checked="" type="checkbox"/>	L3b_19971101-19971130_GLOB_4_AV-SWF_CHL1_MO_00.nc.gz	#5
<input checked="" type="checkbox"/>	L3b_19971101-19971130_GLOB_4_GSM-SWF_CHL1_MO_00.nc.gz	#
<input checked="" type="checkbox"/>	L3b_19971201-19971231_GLOB_4_AV-SWF_CHL1_MO_00.nc.gz	#7
<input checked="" type="checkbox"/>	L3b_19971201-19971231_GLOB_4_GSM-SWF_CHL1_MO_00.nc.gz	#
<input checked="" type="checkbox"/>	L3b_19990101-19990131_GLOB_4_AV-SWF_CHL1_MO_00.nc.gz	#9

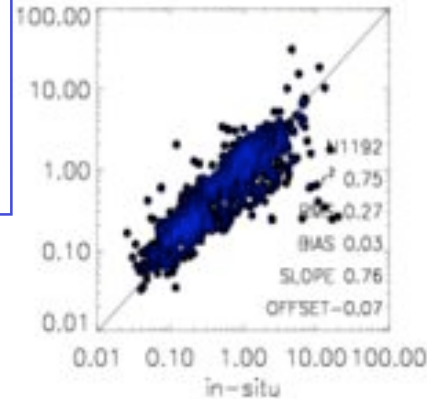

Buttons for "Order Products" and "New search" are visible at the bottom. A footer note states: "All images and data available on this GlobColour site are for research and educational use only".

Match-up analyses (OBPG/NOMAD/BOUSSOLE) & product inter-comparison show:

- Error statistics of the merged data are in general better than data from the three individual sensors
- The normalized water-leaving radiance at 490 nm is by far the most homogeneous product among the 3 sensors
- GlobColour GSM01 merging algorithm shows to be quite robust over coastal waters

AV CHL

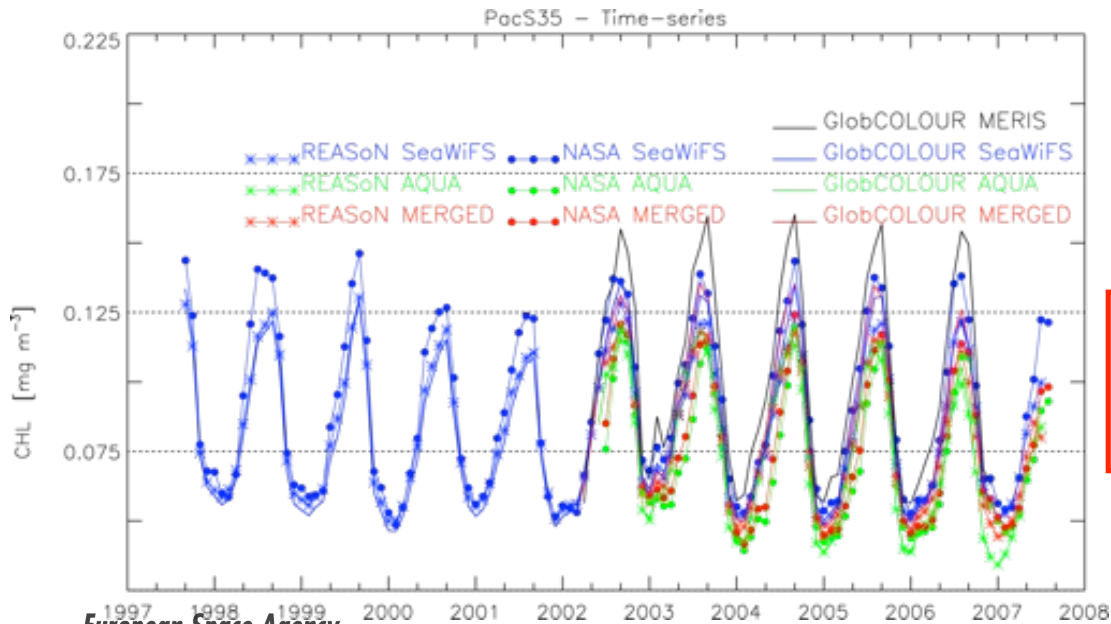

GSM CHL

	REASoN	NASA OBPG	GlobColour
Input Data	<ul style="list-style-type: none"> •SeaWiFS •MODIS-AQUA 	<ul style="list-style-type: none"> •SeaWiFS •MODIS-AQUA 	<ul style="list-style-type: none"> •MERIS •SeaWiFS •MODIS-AQUA
Merging method	•GSM01 model (merges the Lwn(λ))	•Weighted average	<ul style="list-style-type: none"> •GSM01 model (with Lwn(λ) weighting) •Weighted average
Products	<ul style="list-style-type: none"> • CHL • CDM • BBP • (uncertainties for daily products) 	<ul style="list-style-type: none"> • CHL 	<ul style="list-style-type: none"> • 19 products (+ uncertainties for some)
Spatial, temporal resolution	9 km Daily, 4-Day, 8-Day, Monthly	9 km Daily, 8-Day, Monthly, Seasonally, Yearly	4.5 km, 1/4°, 1° Daily, 8-Day, Monthly

- The CHL products, merged or from only the individual sensors are very consistent and agree very well
- MERIS alone tends to produce higher CHL values than SeaWiFS or AQUA
- AQUA alone tends to produce lower CHL values than SeaWiFS or MERIS

Validation results presented at the 2nd user workshop in Oslo, Nov 2007
www.enviport.org/globcolour/validation/

- **GlobColour** products are at least as accurate as the individual sensor products. In most cases they are better. User feedback is very positive.
- **Globcolour** brings several benefits over existing products:
 - better sampling of the daily variability
 - smaller errors because of larger amount of data
 - reduced instrumental biases
 - inclusion of error statistics
- **GlobColour** is a step towards meeting the requirements for an ocean colour Essential Climate Variable, but more work needs to be done !
- Users want a coastal version of GlobColour => **GlobColour 2 (?)**
- **GlobColour** time-series production will continue as part of the EC GMES Marine Core Service from 2009 onwards

MarCoast
a GMES Services Network

**A European service network
providing coastal information
services to operational users**

Credit: MarCoast Project Team

▪ Background

- Initiated in 2005 as part of the GMES Service Element Programme managed and funded by ESA

▪ Objective

- Establish a technical and organizational framework at European level for marine & coastal information services by making best use of EO data, in-situ observations, and models
- Provide information services tailored to the needs of international, regional and national end users in charge of the marine environment (e.g. EEA, EMSA, German Federal & Maritime Hydrographic Agency, etc.)

▪ Key Requirements

- Address all European waters
- Reliable products and services
- Cost effectiveness
- Sustainability

GMES: joint ESA/EU initiative aiming at providing operational geo-spatial information services to operational users and policy makers

- **European Space Policy (adopted in 2007)**
 - ESA responsible for GMES Space Component
 - New European satellites ensuring continuity of operational ocean colour measurements
 - Coherent access to data from contributing missions (Member States, Eumetsat, 3d Party)
 - EU responsible for implementation of services
 - European Commission R&D Budgets and Member States operational budgets

Maritime Context

User interest driven by **European Legislation**

- Convention on the Protection of the Marine Environment of the Baltic Sea
- Integrated Maritime Policy for the EU
- Marine Strategy Directive
- Water Framework Directive

The MARCOAST service network is delivering a wide array of products to support the monitoring of the European Seas

- **Oil spill service chain**
 - Oil spill alert and polluter identification
 - Oil spill drift forecast

- **Water quality service chain**
 - Water quality monitoring service
 - Algae bloom monitoring, evolution and forecasting service
 - Water quality indicators

- **Service network:** 32 Service Providers (coordinated by Alcatel Aleniaspace)
- **Users:** Operational environmental agencies from 11 European coastal states
- **Service Level Agreements (45):** Formal agreements between Users and Service Providers

<http://serviceportal.marcoast.eu>

The screenshot shows the MarCoast Service Portal interface. At the top left, it says "Service Portal" and "MarCoast". Below this is a navigation menu with links for "Oil Spill", "Water Quality", "Met-Ocean Data", "Statistics", "Map", and "Help". On the right side of the top navigation bar, there are input fields for "Username" and "Password", and a "Log In" button. The main content area is divided into two columns. The left column is titled "Geographical search" and features a map of Europe with a red dashed line indicating a search area. Below the map are navigation icons and a "SEARCH" button. The right column contains introductory text about MarCoast, a list of services, and a "Recent Additions" section. The "Recent Additions" section lists two items: "A Water Transparency - Apr 2008" and "A Water Transparency - Apr 2008 - 3rd decade". At the bottom left, there is a "Free text search" section with a "Free text" input field and a "SEARCH" button. The footer of the page includes the text "Partig" and the MarCoast logo with the tagline "a GMES Services Network".

SEARCH

MarCoast (Marine and Coastal Environmental Information Services) is a three year GMES (Global Monitoring for Environment and Security) project funded by the European Space Agency with the aim of establishing a durable network of marine and coastal information services. You can find more information about this project at www.gmes-marcoast.com.

The site you are visiting now is the MarCoast Service Portal, which provides a catalogue of the services provided by the MarCoast partners. These services are classified in 3 categories that you can access using the menu at the top of this page:

- + Oil Spill Service
- + Water Quality and harmful Algae Bloom monitoring Service
- + MET-OCEAN Data and Water Quality Assessment Service

Recent Additions

- + A Water Transparency - Apr 2008
- + A Water Transparency - Apr 2008 - 3rd decade

Algal bloom in the North Sea

Zusammenfassung

Woche 06.05. - 12.05.2008

Algenblüte in der zentralen Ostsee

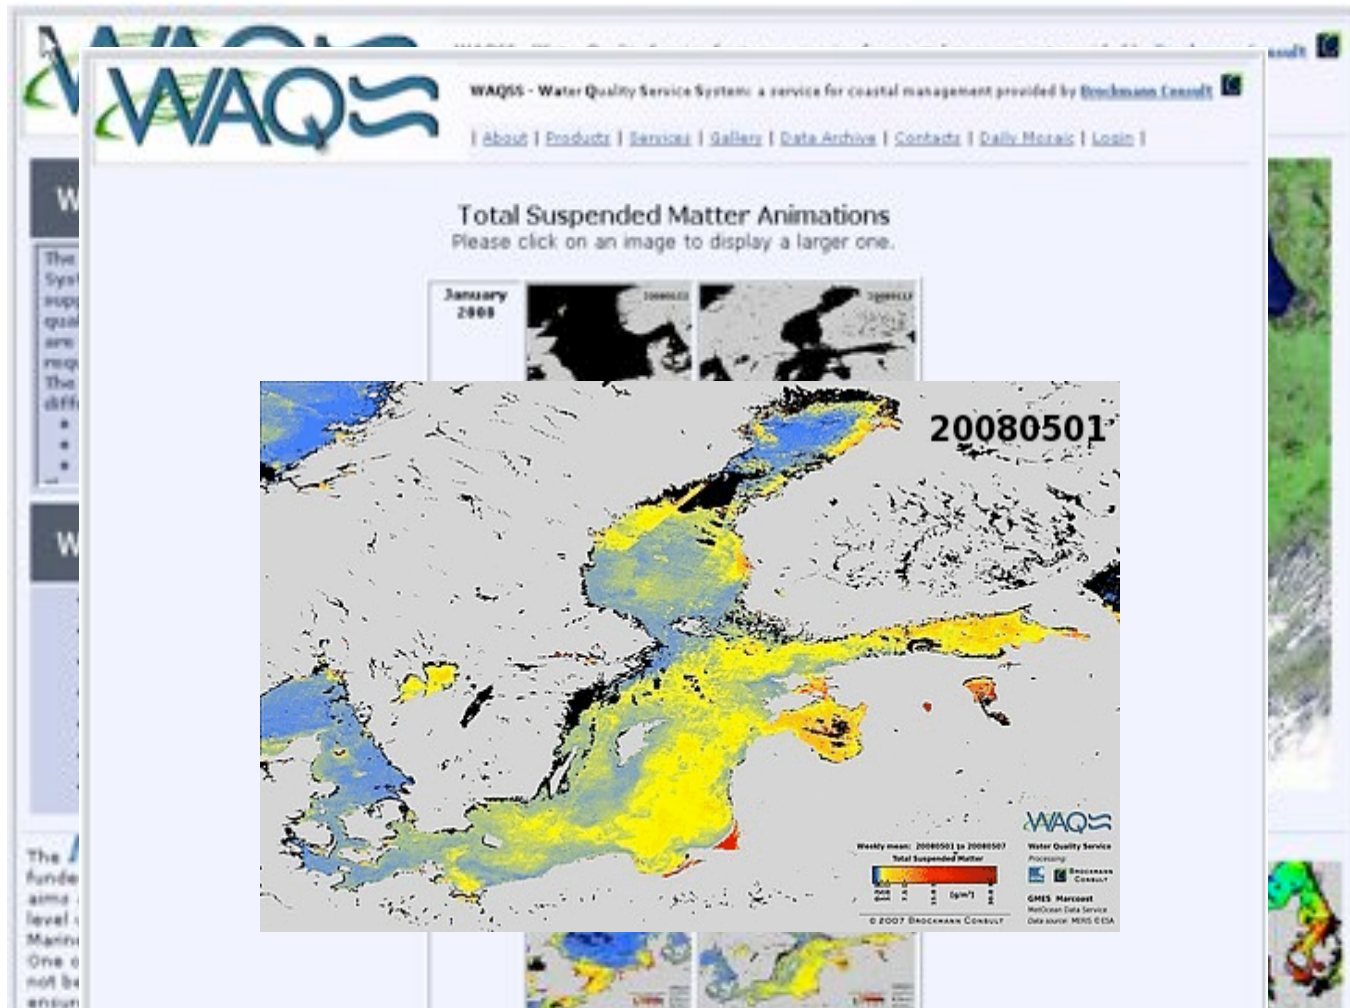

Sehr hohe Chlorophyllkonzentrationen in der zentralen Ostsee bis an die mecklenburg-vorpommersche Küste. Im Kattegat an der Dänischen Küste nehmen die Chlorophyllkonzentrationen im Laufe der Woche zu. Die Algenblüte in der Nordsee zeigt im Wochenmittel noch hohe Chlorophyllkonzentrationen, die Tageswerte zeigen jedoch eine Auflösung der Algenblüte.

Die Temperaturen liegen in der Nordsee an der schleswig-holsteinische Küsten sowie im der westlichen Ostsee zwischen: 13-18°C. An der niedersächsischen Küste und in der zentralen Ostsee liegen die Temperaturen zwischen: 10 -13°C.

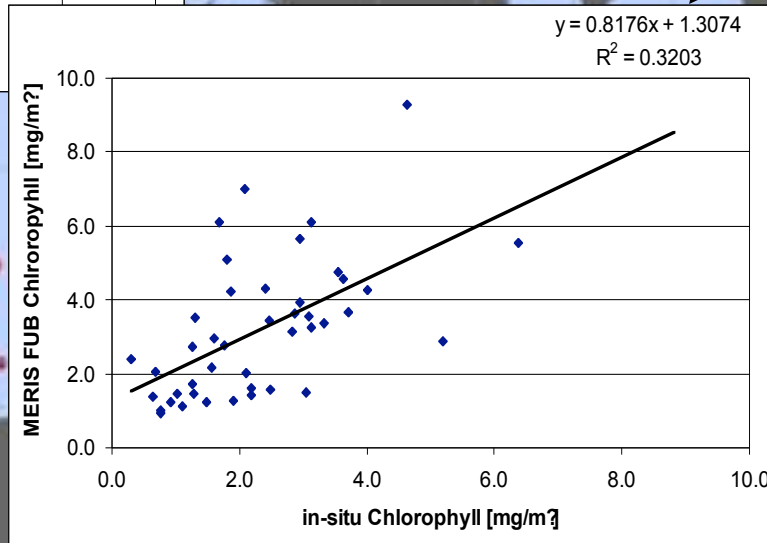

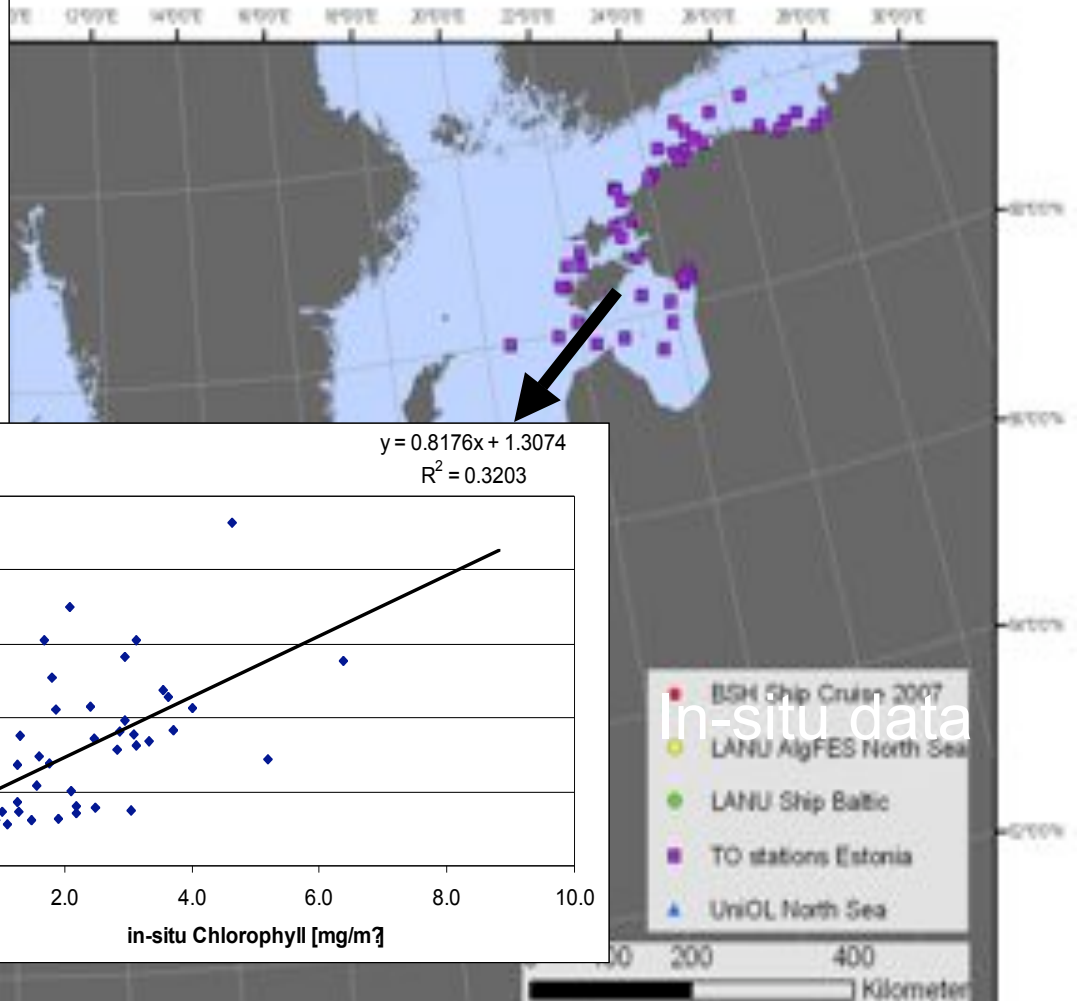

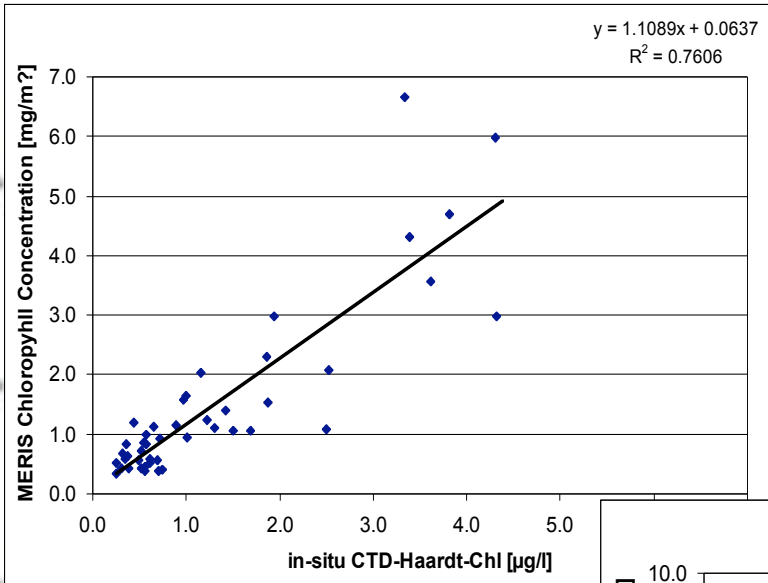

TSM distribution in the Baltic Sea

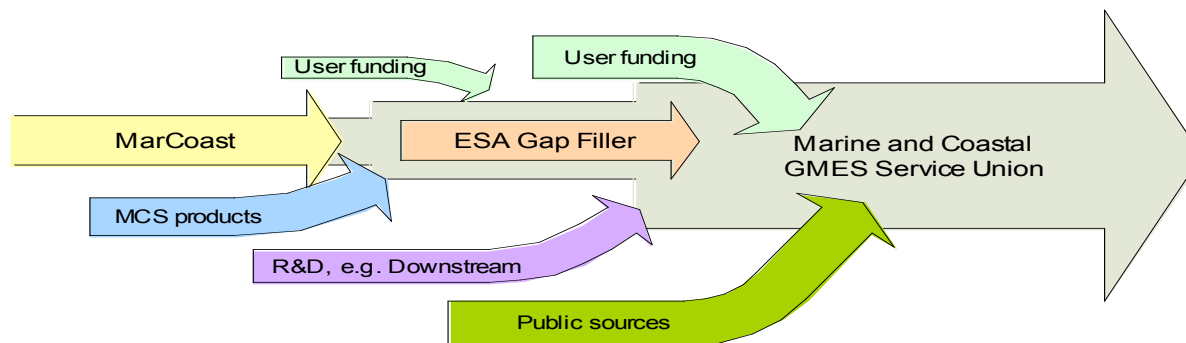

www.waqss.de

- **Validation Bureau:** ensures high quality of products & services
 - Independent from service providers
 - Validation process development & service quality assessment
- **Validation Procedure**
 - Validation Protocol
 - Product Validation: Comparison against in-situ (user) data
 - Service Validation guided by SLA
 - Documentation, timeliness, reliability, completeness, user information
 - Service Provider Validation Report evaluated by end user
 - Final assessment by Validation Bureau & feedback to users and service providers
- **Validation Workshops**
 - Open to external experts & review of individual services
 - Scientific discussion & recommendations

- **Outlook for MARCOAST services is very encouraging**
 - Evolution in policy is creating demand for operational marine services
 - Well coordinated service network providing policy relevant information services
 - Very positive user feedback; users are going to contribute to service costs
- **Consolidation of water quality services required**
 - better regional algorithms & extension of FR MERIS based services
 - new services (indicators, oxygen depletion, forecasting)
- **Maintaining service continuity is critical**
 - data continuity ensured through new operational missions (ESA Sentinels)
 - continued ESA funding and progressive transfer to operational funding lines (EC, national) → EC GMES Marine Core Services

ESA GlobCover Project

Objectives:

- Global Land Cover Map Dec 2004/Jun 2006 using MERIS data at 300m
- Update, complement, improve other existing comparable global products (e.g. GLC-2000, EC-JRC, 1km resolution)

Accuracy goal:

- 70%; (GLC 2000: 68%)

Partnership:

- DUE project led by international network of partners: ESA – EC JRC - UN
FAO - UNEP - EEA – IGBP
- Defining user requirements and providing feedback on product quality

Implementation:

- Kick-off April 2005
- ESA, ACRI, UK PAC, MEDIAS, Brockmann, UCL

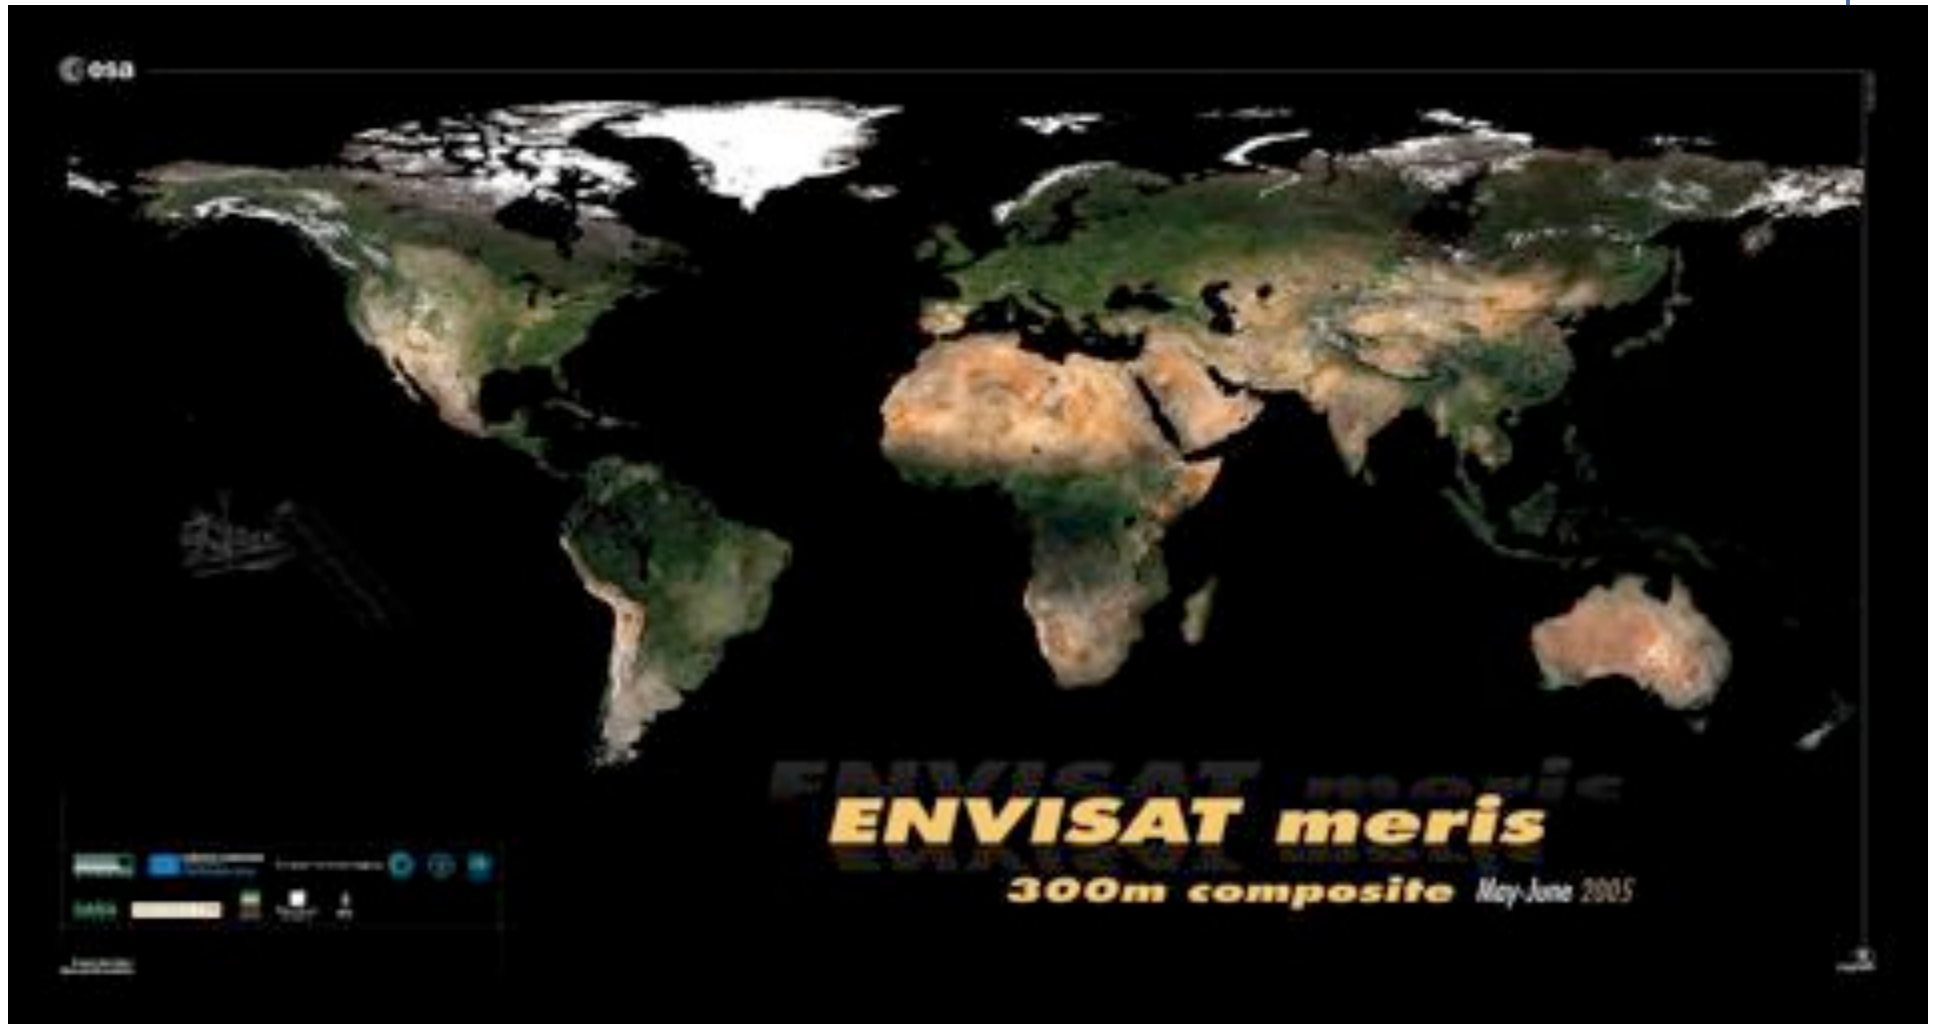

Outputs:

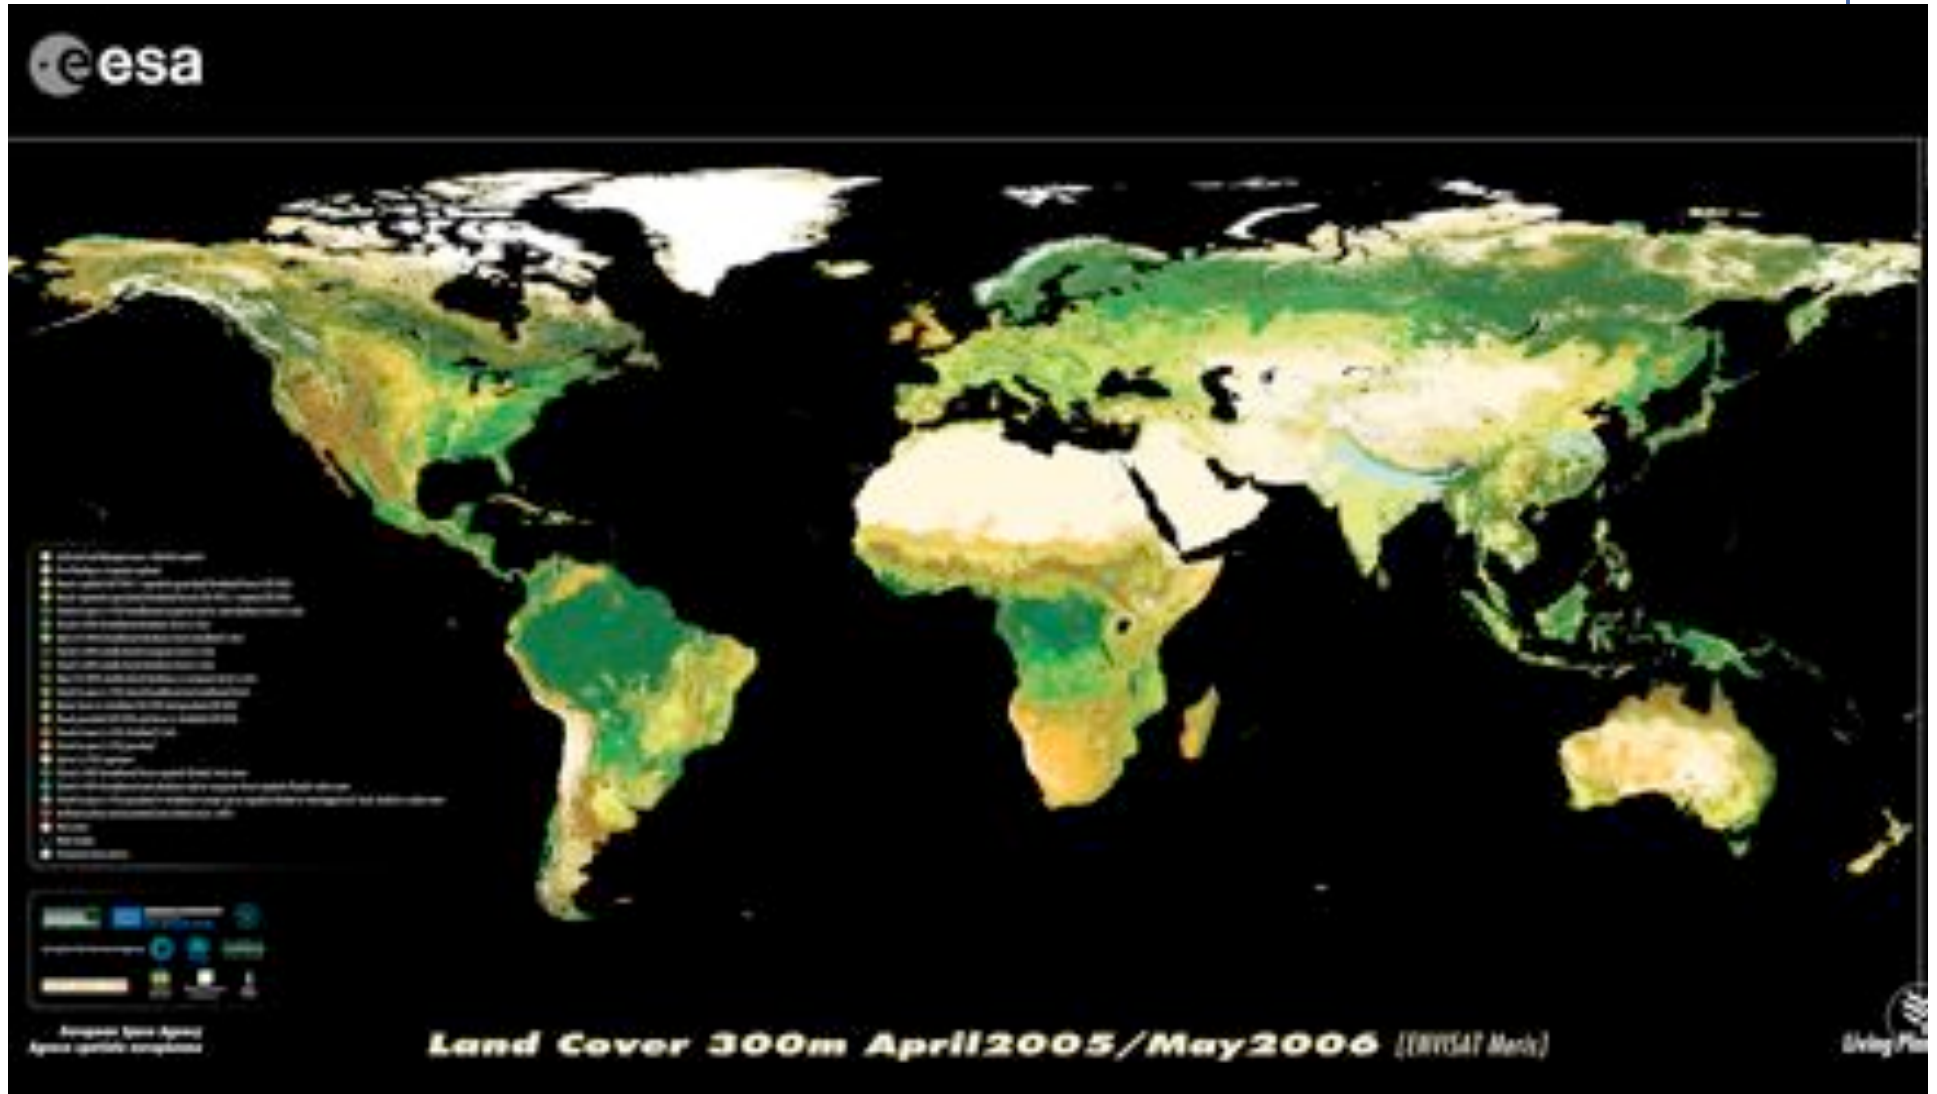

- Bi-monthly MERIS FR surface refl. composite
- **GlobCover Land Classification Map V1 (Feb 2008)**

European Environment Agency

Globcover

300 m res.

GLC2000

1 km res.

Classification system compatible with the GCL 2000

22 land cover types compatible with the FAO-UNEP LCCS

|  | Cultivated and Managed areas |  | Mosaic forest or shrubland (50-70%) and grassland (20-50%) |
|  | Post-flooding or irrigated croplands |  | Mosaic grassland (50-70%) and forest or shrubland (20-50%) |
|  | Mosaic cropland (50-70%) / vegetation (grassland/shrubland/forest) (20-50%) |  | Closed to open (>15%) shrubland (<5m) |
|  | Mosaic vegetation (grassland/shrubland/forest) (50-70%) / cropland (20-50%) |  | Closed to open (>15%) grassland |
|  | Closed to open (>15%) broadleaved evergreen and/or semi-deciduous forest (>5m) |  | Sparse (<15%) vegetation |
|  | Closed (>40%) broadleaved deciduous forest (>5m) |  | Closed (>40%) broadleaved forest regularly flooded, fresh water |
|  | Open (15-40%) broadleaved deciduous forest/woodland (>5m) |  | Closed (>40%) broadleaved semi-deciduous and/or evergreen forest regularly flooded, saline water |
|  | Closed (>40%) needle-leaved evergreen forest (>5m) |  | Closed to open (>15%) grassland or shrubland or woody vgt on regularly flooded or waterlogged soil, fresh, brakish or saline water |
|  | Closed (>40%) needle-leaved deciduous forest (>5m) |  | Artificial surfaces and associated areas (Urban areas >50%) |
|  | Open (15-40%) needle-leaved deciduous or evergreen forest (>5m) |  | Bare Areas |
|  | Closed to open (>15%) mixed broadleaved and needleleaved forest |  | Water Bodies |
| | |  | Permanent Snow and Ice |

- GlobCover V1 released to team of 12 external experts for validation
- Comparison of GlobCover classification with “ground truth” data
- Results presented to users at 2nd User Consultation Workshop (Mar 2008):
 - Product does not reach yet the envisaged accuracy level of 70%
 - Overall accuracy ranked 66.5 % according to land cover types; several artefacts
 - Need for improved cloud detection, aerosol correction, snow processing, water/forest discrimination
 - Need for regionally-tuned approach to the data

→ Consolidated GlobCover V2

soon available at:

<http://www.esa.int/dua/ionia/globcover>

The background of the slide is a light blue image showing a globe of Earth with several satellite orbits and satellite icons, representing the G-POD system.

ESA Grid Processing on Demand (G-POD)

- **Scientists have the processing algorithms**

- **What they need is Data!**

- Near-real-time data, decades of data, multi-source data

- **Operational issues**

- Space missions generate large data volumes (Envisat > 500 GB/day)
 - EO data archive is “scattered”
 - Algorithms evolve → need for recurrent reprocessing (→ re-distribution)
 - Moving the data to the users is “costly”
 - Significant investments required to handle the data at the scientist’s lab

- **Using GRID can solve the problem**

- Move processors close to the data in a flexible and controlled way
 - Resources can be shared/re-used (data, tools, computing resources)
 - Providing a common shared platform → Collaborative Environment

➤ A User-Segment data processing environment

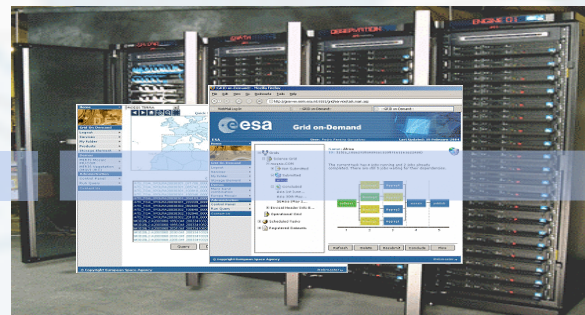

- Over 200 CPUs, 120 Tbytes online (ESA & 3d party) , tools (IDL, Matlab, compilers, image processing utilities...), catalogue queries & data provision functions
- Hosts user processors: “production” lab / “collaboration” environment
- Open and sizeable: Able to host “any” processor
- Simple engineering model and instructions, clear interfaces (no G-POD expertise needed)
- Engineering and production phases fully supported by ESA

➤ Systematic / On-demand processing of large data volumes

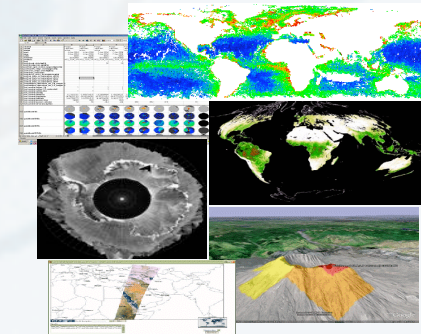

- Wide ranging applications supported

on-line data archives

User controls from the web portal his own processor running on G-POD computers

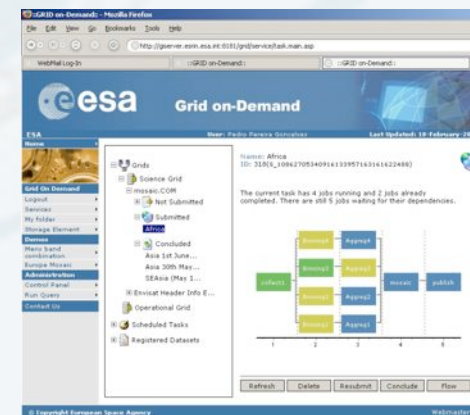

high-level products

Flexible, secure, generic and distributed multi-functional platform:

- Temporal/spatial selection of EO products for the Grid processing
- set up the processing script and monitor the actual processing
- Tools for result visualization
- Access to output products and related documentation

MERIS Level-3 Products

- Monthly at 9 km resolution, sinusoidal grid (2002-2008)
- Daily at 4.6 km resolution grid (2007, 2008)

<http://envisat.esa.int/level3/meris/>

Normalised water leaving radiance at 412, 443, 490, 510, 560 nm
Chlorophyll-a, case-1 water (chl1)
Angstrom alpha coefficient over water at 865 nm
Aerosols optical thickness over water at 865 nm
Angstrom alpha coefficient over land and water at 550 nm
Aerosols optical thickness over land and water at 550 nm
Total water vapor column, clear sky
ABSOA_DUST flag statistics
MERIS Global Vegetation Index
Aerosols optical thickness over land at 443 nm

- **Growing demand for G-POD on-demand processing capabilities**
- **Cost Effective Solution**
 - One Infrastructure investment for shared use
 - No need for large volume data movement
 - Simple integration of a new G-POD application
- **Extend G-POD to other ESA facilities e.g. Kiruna, PACs, 3d party facilities**
- **Promote the G-POD concept e.g. for future GMES Ground Segment**

Deforestation area (195 km x 120 km)
in the Amazonian Forest (Brazil)

Globcover

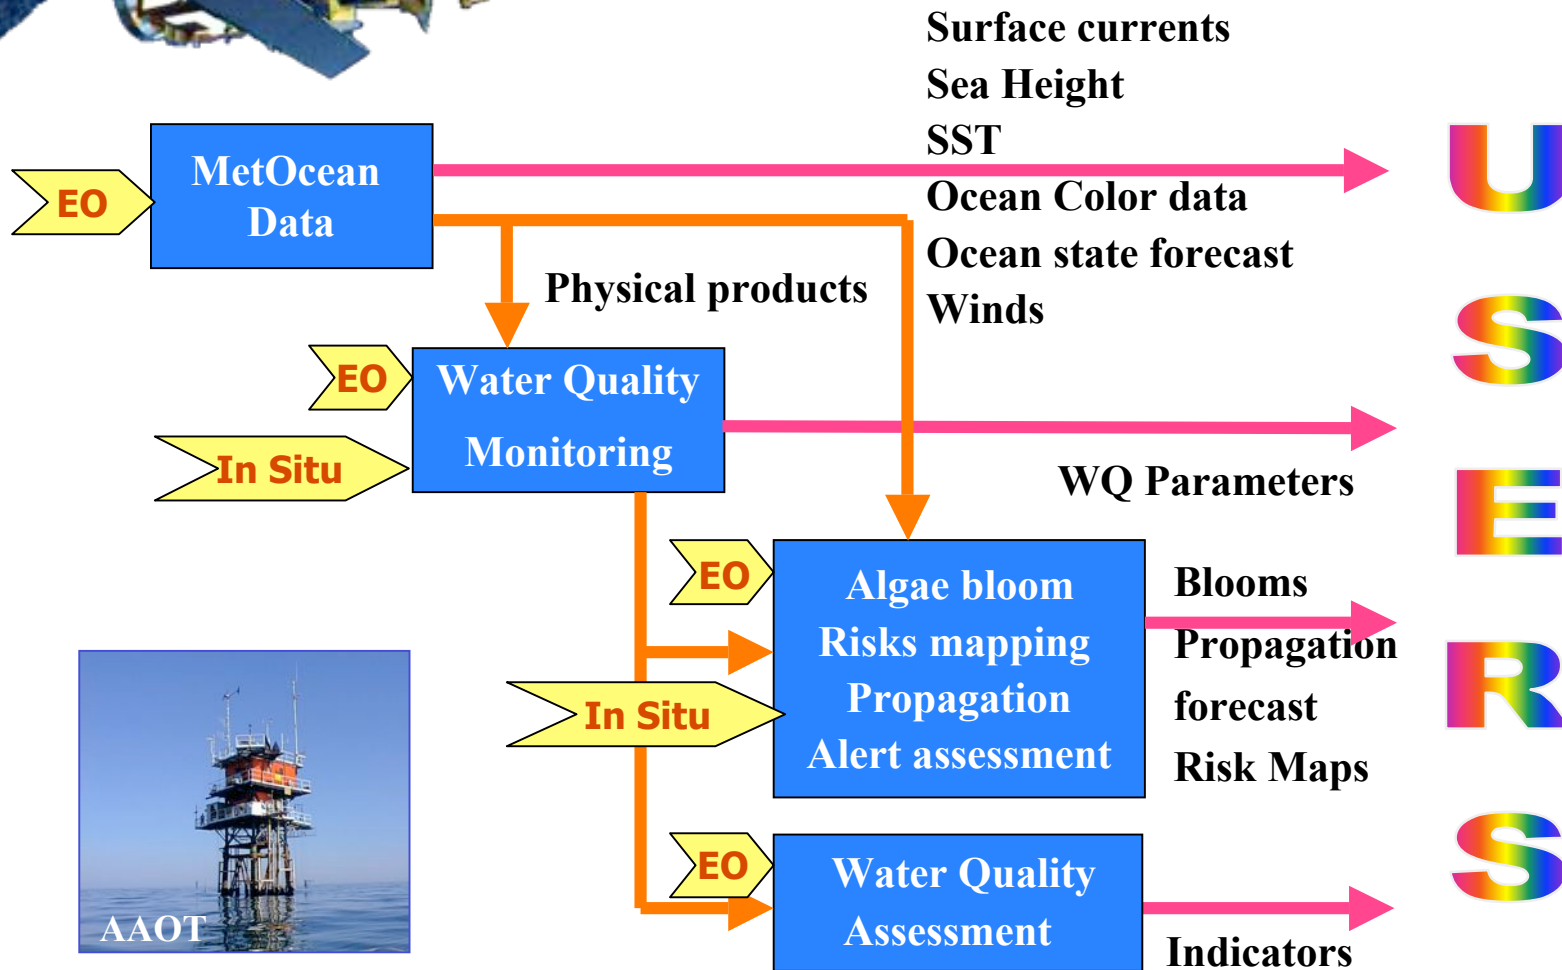

300 m res.

GLC2000

1 km res.

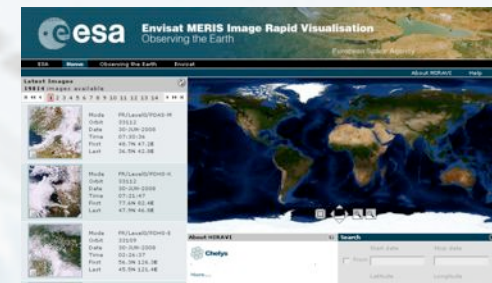

- **MERIS Level-3 Products**

- Daily/monthly L3 products available on-line
<http://envisat.esa.int/level3/meris/>

- **MIRAVI Geo-toolbox**

- Geo-coding of MERIS full resolution images produced by MIRAVI real-time service

- **AeroMeris**

- Fast pixel extraction over user-area and statistics from the complete MERIS level-2 product archive

- **Global & Regional True Colour Mosaics**

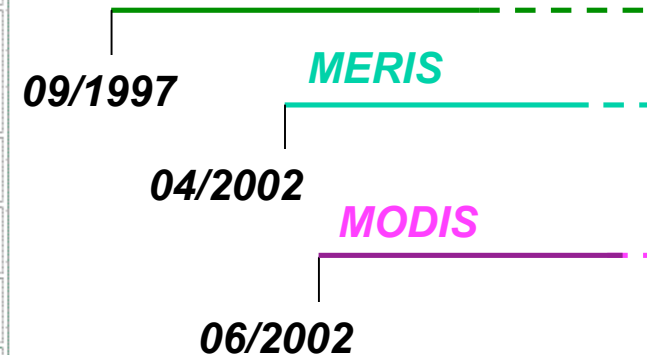

Daily, 8-days, monthly products at 4.6 km res.

<http://www.globcolour.info>

Parameter	Description	L3 merging method	M
CHL ₁	chlorophyll-a concentration (mg/m ³) for case 1 water	GSM model	
CHL ₂	chlorophyll-a concentration (mg/m ³) for case 2 water	weighted averaging method	★
TSM	total suspended matter concentration (g/m ³)	weighted averaging method	★
CDM	Coloured dissolved and detrital organic materials (m ⁻¹)	GSM model	
b _{bp}	particulate back-scattering coefficient at 443 nm (m ⁻¹)	GSM model	
Kd(490)	diffuse attenuation coefficient at 490 nm (m ⁻¹)	analytical from merged CHL ₁	
Lxxx	fully normalised water leaving radiances at xxx nm (mW/cm/m/sr) where xxx= 412, 443, 490, 510, 531, 550-565, 620, 665-670, 681 and 709 nm	weighted averaging method	
L555	inter-calibrated fully normalised water leaving radiances at 555 nm (mW/cm/m/sr)	weighted averaging methods (1)	
EL555	relative excess of radiance at 555 nm (%)	analytical from merged L555 & CHL ₁	
T865	aerosol optical thickness over water (-)	weighted averaging methods	
CF	cloud fraction (%)	classification & statistical methods	

SeaWiFS

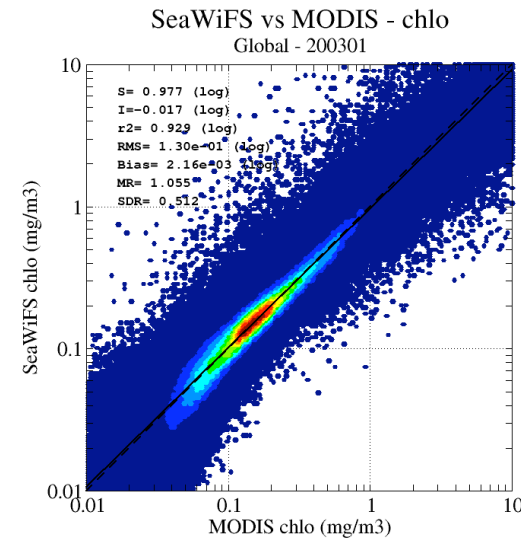

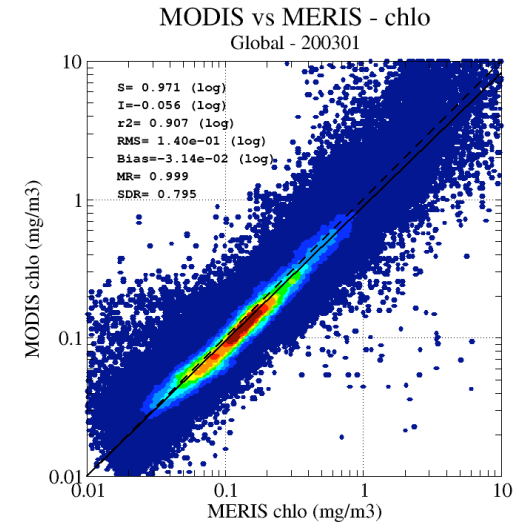

+ error estimates for the output merged products

End 2008 start of NRT service demonstration ?

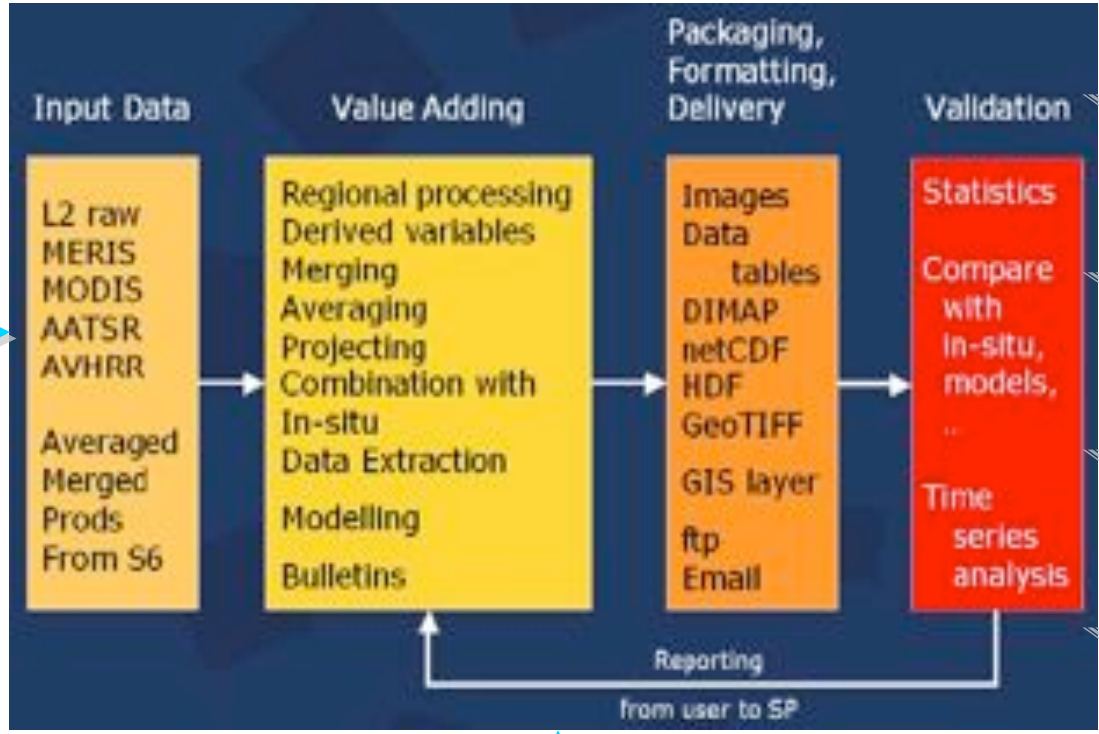

Difficulties

- Different sensor design, calibration, sensitivity, algorithms, accuracies,....
- Large volumes of data to deal with
- Merging procedure should not create biases, discontinuities, artifacts,...

GlobCover V1 (Feb 2008)

- released to the project team members
 - assessed at 2nd User Consultation (Mar 2008)
- =>
- overall accuracy ranked 73% according to land cover types, however several artefacts

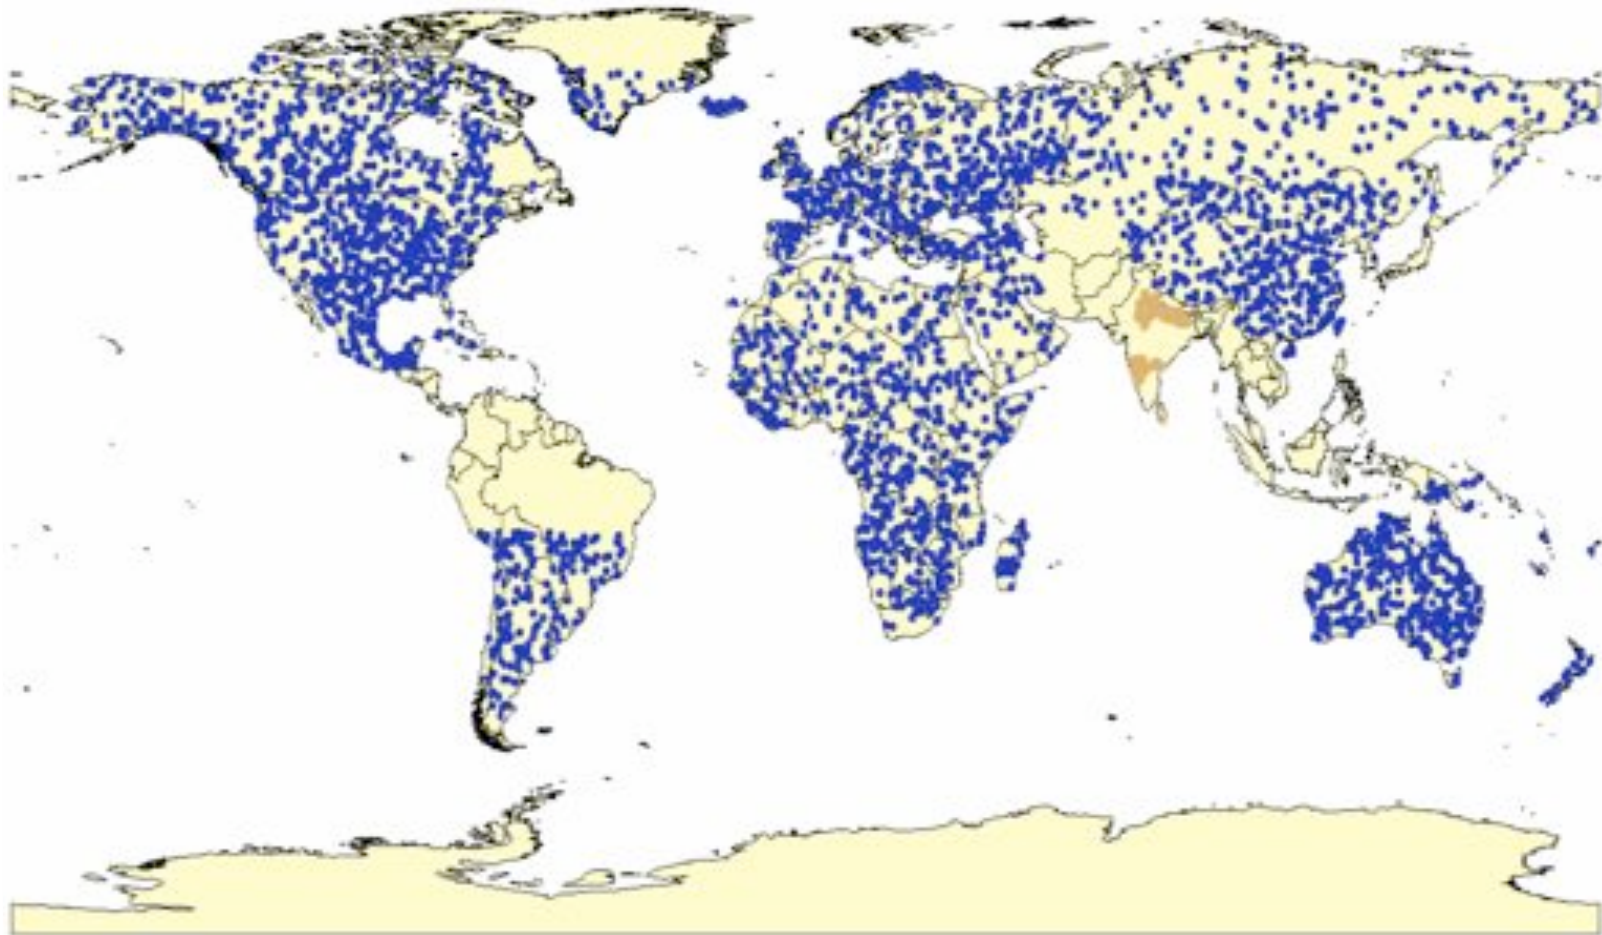

GlobCover V2 (Aug 2008)

- consolidated version
- regionally-tuned approach to the data
- improved cloud detection, snow processing, aerosol correction

Globcover V2 soon available at:

<http://www.esa.int/duel/tonia/globcover>
